                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 36, Application US/08925767

Patent No. 6225084

GENERAL INFORMATION:

GENERAL INFORMATION:

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE TITLE OF INVENTION: TREATMENT AND DIAGNOSIS OF CARDIOVASCULAR DISEASE NUMBER OF SEQUENCES: 38 .

CORRESPONDENCE ADDRESS:

ADDRESSEE: PENNIE & EDMONDS

STREET: 1155 Avenue of the Americas

GITY: New York

STATE: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                      .

Sequence 36, Application US/08944496

Patent No. 6124433

GENERAL INFORMATION:
APPLICANT: FALB, DEAN A

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE
TITLE OF INVENTION: TREATMENT AND DIAGNOSIS OF CARDIOVASCULAR DISEASE
NUMBER OF SEQUENCES: 54

CORRESPONDENCE ADDRESS:
ADDRESSE: PENNIE & EDMONDS LLP
STREET: 1155 Avenue of the Americas
CITY: New York

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Description

This point has been overlooked on several occasions, with the consequence of erroneous Alu-derived amino acid sequences being reported.

CAUTION: Any significant similarity of a putative protein sequence with an Alu-translated entry must be taken as a warning that a part of Alu repeat may have been artifactually included in the coding nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  "Identifying coding exons by similarity search: alu-derived and other

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Charled.

Charlon: Any significant similarity of a putative protein sequence with an Au translated entry must be taken as a warning that a part of Alu repeat may have been artifactually included in the coding nucleotide sequence.
                                                                    Jurka J., Milosavljevic A.;
Jurka J., Milosavljevic A.;
J. Reconstruction and analysis of human Alu genes.";
J. Mol. Evol. 32:105-121(1991).
-!- MISCELLANEOUS: VARIOUS ANALYSES (SEE REF. 3 AND REF. 4) INDICATE
THAT ALU REPEATS FALL INTO 8 SUBFANILISE. THEREFORE, 8 ALU WARNING
CONSENSUS SEQUENCES HAVE BEEN CONSTITUTED THAT CONTAIN ALL SIX
FRAMES CONCEPTUAL TRANSLATIONS OF EACH OF THESE CLASSES OF ALU
                                                                                                                                                                                                                                                                                                                                                                                                                    ligated with Alt-derived sequence in any orientation. Although Aluelements (especially situated on the complementary strand) have a great potential to create additional/alternative exons, consideration should be given to the possibility that the presence of an Alu in an open reading frame may have resulted from a cloning artifact or may be due to misinterpretation of sequencing data. This point has been overlooked on several occasions, with the consequence of erroneous Alu-derived amino acid sequences
                                                                                                                                                                                                                                                                                                      Courties and a sequences are interspersed in human and primate genomes with an average spacing of 4 kb. Some of them are actively transcribed by pol III. Normal transcripts may contain Alu-derived sequences in 5 or 3 untranslated regions. However, CDNA libraries also contain partial and/or rearranged CDNAs
                                                                                                                                                                                                                       MISCELLANBOUS: ISOLATED 'X' INDICATES THE PRESENCE OF A STOP CODON, 'XXX' IS USED TO SEPARATE THE VARIOUS TRANSLATION PHASES. CAUTION: This Alu entry is provided in order to avoid the further pollution of protein sequence databases with Alu-derived amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ALU4 HUMAN STANDARD; PRT; 603 AA.

Some of them are actively transcribed by pol III. Normal transcripts may contain Alu-derived sequences in 5' or 3' untranslated regions. However, cDNA libraries also contain partial and/or rearranged cDNAs ligated with Alu-derived sequence in any orientation. Although Alu elements (especially situated on the complementary strand) have a great potential to create additional/alternative exons, consideration should be given to the possibility that the presence of an Alu in an open reading frame may have resulted from a cloning artifact or may be due to misinterpretation of sequencing data. This point has been overlooked on several occasions, with

C-1- MISCELLANDEOUS: ISOLATED 'X' INDICATES THE PRESENCE 'OF A STOP CODON, 'XXX' IS USED TO SEPARATE THE VARIOUS TRANSLATION PHASES.

-- CAUTION: This Alu entry is provided in order to avoid the further pollution of protein sequence databases with Alu-derived amino acid sequences.

-- CAUTION: Alu repetitive sequences are interspersed in human and primate genomes with an average spacing of 4 kb. Some of them are citively transcribed by pol III. Normal transcripts may contain actively transcribed by pol III. Normal transcripts may contain actively transcribed by pol III. Normal and/or rearranged cDNas indexived sequences in any orientation. Although Alu elements (especially situated on the complementary strand) have a great potential to create additional/alternative exons.

C and alu in an open reading frame may have resulted from a

"Reconstruction and analysis of human Alu genes.";

J. Mol. Evol. 32:105-121(1991).

-I MISCELLANEOUS: VARIOUS ANALUSES (SEE REF.3 AND REF.4) INDICATE
THAT ALU REPRATS FALL INTO 8 SUBFAMILIES. THEREFORE, 8 ALU WARNING
CONSENSUS SEQUENCES HAVE BEEN CONSTITUTED THAT CONTAIN ALL SIX
FRANCES CONCEPTUAL TRANSLATIONS OF EACH OF THESE CLASSES OF ALU
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CAUTION: Alu repetitive sequences are interspersed in human and primate genomes with an average spacing of 4 kb. Some of them are actively transcribed by pol III. Normal transcribts may contain Alu-derived sequences in 5 or 3' untranslated regions. However, CDNA libraries also contain partial and/or rearranged cDNAs ligated with Alu-derived sequence in any orientation. Although Alu elements (especially situated on the complementary strand) have a great potential to create additional/alternative exons. Consideration should be given to the possibility that the presence of an Alu in an open reading frame may have resulted from a cloning artifact or may be due to misinterpretation of sequencing data. This point has been overlooked on several occasions, with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CAUTION: Any significant similarity of a putative protein sequence with an Alu-translated entry must be taken as a warning that a part of Alu repeat may have been artifactually included in the coding nucleotide sequence.
                                                                                                                       similarity search: alu-derived and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MISCELLANFOUS: ISOLATED 'X' INDICATES THE PRESENCE OF A STOP COODN, 'XXX' IS USED TO SEPARATE THE VARIOUS TRANSLATION PHASES. CAUTION: This Alu entry is provided in order to avoid the further pollution of protein sequence databases with Alu-derived amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        data. Mol. Evol. 32:105-121(1991).

-!- MISCELLANGOUS, VARLOUS ANALYSES (SEE REF.3 AND REF.4) INDICATE THAT ALU REPEATS FALL INTO 8 SUBFAMILIES. THEREFORE, 8 ALU WARNING CONSENSUS SEQUENCES HAVE BEEN CONSTITUTED THAT CONTAIN ALL SIX FRAMES CONCEPTUAL TRANSLATIONS OF EACH OF THESE CLASSES OF ALU
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                primate genomes with an average spacing of 4 kb. Some of them are actively transcribed by pol III. Normal transcripts may contain Alu-derived sequences in 5 or 3' untranslated regions. However, convolved in the constant of the convolved sequence in any orientation. Although Alu-derived sequence in any orientation. Although Alu-derived sequence in any orientation. Although Alu-derived sequence in any orientation. Although Alu-derived sequence on the complementary strand) have a great potential to create additional/elernative exons, consideration should be given to the possibility that the presence of an Alu in an open readdit frame may have resulted from a cloning artifact or may be due to misinterpretation of sequencing data. This point has been overlooked on several occasions, with the consequence of erroneous Alu-derived amino acid sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            being reported.

CAUTION: Any significant similarity of a putative protein sequence with an Alu-translated entry must be taken as a warning that a part of Alu repeat may have been artifactually included in the coding nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claverie J.-M.;

```
acid sequences.

CAUTION: Alu repetitive sequences are interspersed in human and primate genomes with an average spacing of 4 kb. Some of them are actively transcribed by pol III. Normal transcribts may contain Alu-derived sequences in 5' or 3' untranslated regions. However, CDNA libraries also contain partial and/or rearranged CDNAs ligated with Alu-derived sequence in any orientation. Although Alu elements (especially situated on the complementary strand) have a great potential to create additional/alternative exons, consideration should be given to the possibility that the presence of an Alu in an open reading frame may have resulted from a cloning artifact or may be due to misinterpretation of sequencing data. This point has been overlooked on several occasions, with the consequence of erroneous Alu-derived amino acid sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                        being reported.
CAUTION: Any significant similarity of a putative protein sequence
with an Alu-translated entry must be taken as a warning that a
part of Alu repeat may have been artifactually included in the
coding nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                    Ettinger A.J., Feng G., Sanes J.R.;
J. Biol. Chem. 273:19922-19922(1998)
-!- FUNCTION: Component of the sarcoglycan complex, a subcomplex of the dystrophin-glycoprotein complex which forms a link between the F-actin cytoskeleton and the extracellular matrix.
-!- SUBCELLULAR LOCATION: Type I membrane protein. Sarcolemmal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

HU M.C.-T., Qiu W.R., Wang X., Meyer C.F., Tan T.-H.;

"Human HPKI, a novel human hematopoietic progenitor kinase that activates the JNK/SAPK kinase cascade.";

Genes Dev. 10:2251-2264(1996).

-!-FUNCTION: May play a role in the response to environmental stress.

Appears to act upstream of the c-jun N-terminal pathway.
                                                                                                                                                                                                                                                                                                                                                                              | R | Min, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls, bolls

PROTEIN KINASE.
-!- FUNCTION: May play a role in hematopoietic lineage decisions and growth regulation (By similarity).
-!- CATALYTICA CACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-!- COFACTOR: Magnesium.
-!- SUBUNT: Interacts with MAPBKI.
-!- TISSUE SPECIFICITY: Expessed primarily in hematopoietic organs, including bone marrow, spleen and thymus. Also expressed at very law expressed in lung, kidney, mammary glands and small
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              R MIM; 601983; ---

New breast-specific nucleic acids and polypeptides, useful for identifying, diagnosing, monitoring, staging, imaging, and treating breast cancer and non-cancerous disease states in breast tissues.

Claim 11; Page 245; 281pp; English.

The invention relates to breast specific nucleic acids (BSNA) and breast-specific polypeptides (BSP). Also included are a method for determining the BSNA in a sample, a vector comprising a BSNA, a host cell comprising the vector, a method for producing a polypeptide encoded by a BSNA, an anti-BSP antibody and a method for determining the presence of a BSP in a sample. The breast-specific mucleic acids, polypeptides and compositions comprising them are useful for indentifying, diagnosing, monitoring, staging breast cancer, mammary tumour and non-cancerous disease states in breast tissue; for identifying breast tissue; for monitoring, identifying and/or designing agonists and antegonists of the polypeptides; in gene therapy; in producing transgenic animals and cells; for producing engineered breast tissue for treatment and research, and as elements in an array or computer program for pattern recognition

The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for useful for identifying a therapeutic agent for useful interactions of the polypeptide. Vectors comprising the physiological interactions of the polypeptides we cells genetically engineered to express them are also useful for producing the proteins. The waste as the useful in genetic vaccination, testing and therapy, and can be used to express them are also useful for producing the proteins. The waste for increase stem cell proliferation, to require the aematopoiesis, and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AAU20510-AAU3304 represent the amino acid sequences of novel human secreted proteins of the invention
                                                                                                                                                           ö
of breast disorders. The nucleic acids may be used as hybridisation probes to detect, characterise and quantify hybridising nucleic acids in, and isolate hybridising nucleic acids from, both genomic and transcript-derived nucleic acid samples. The BSP protein may be used in a vaccine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy.
                                                      composition for raising an immune response against breast cancer. The present sequence is BSP protein of the invention

The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the conclination are also useful for producing the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins of the conclination and can be used as untitional supplements. They may be used to increase stem cell proliferation, to regulate haematopolesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AMU29510-AMU33304 represent the amino acid sequences of novel human expression and the conclination.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to abstrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation, to regulate haematopoissis, and in bone, cartilage, tenden and/or nerve tissue growth or regeneration; immune suppression and/or etimulation; as anti-inflammatory agents; and in treatment of leukaemias. Auto39510-AAU33304 represent the amino acid sequences of novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  33
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9

                                                                                                                                                                                                The invention relates to a novel polynucleotide encoding a guanosine triphosphare-binding protein coupled receptor (GPCR). A polynucleotide of the invention may have a use in gene therapy. The polynucleotide and polypeptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphare-binding protein coupled receptor. The protein sequences shown in ADC85549-ADC87617 represent GPCR's of the invention.
New polynucleotide, useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of t guanosine triphosphate-binding protein coupled receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         human; GPCR; guanosine triphosphate-binding protein coupled receptor;

                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                The invention relates to a novel polynuclectide encoding a guanosine triphosphate-binding protein coupled receptor (GPCR). A polynucleotide of the invention may have a use in gene therapy. The polynucleotide and polypeptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the quanosine triphosphate-binding protein coupled receptor. The protein sequences shown in ADC85549-ADC87617 represent GPCR's of the invention.
                                                                                                                                                                           New polynucleotide, useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human, vaccination; gene therapy; nutritional supplement; stem cell proliferation; haematopoiesis; nerve tissue regeneration; immune stimulation; anti-inflammatory; leukaemia.

The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the conclide encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins of the polypeptide and therapy, and can be used to express them are also useful for producing the proteins. The proteins are useful an supplements. They may be used to increase stem cell proliferation; to regulate haematoryobiasis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. ANU29510-ANU33304 represent the amino acid sequences of novel human contracts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to novel human secreted polypeptides. The polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agoniets and antagoniets) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. ö
nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AAU29510-AAU33104 represent the amino acid sequences of novel human secreted proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer; vulnerary; anticonvulsant; antidecterial; antifungal; antiparasitic; cardiant; gene therapy; cancer; immune disorder; cardiovascular disorder; neurological disease; infection; human; secreted protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the human secreted proteins AB28012-B28060. This sequence represents a the describtor line. The sequence is a search result from a BLASTX homology search. The sequence is a search result from a BLASTX homology search. The genes and proteins are useful for preventing, ameliorating or treating medical conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: a cancer, e.g. breast and ovarian cancer, and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              treating cancers, hyperproliferative disorders, inflammatory disorders, neurological disorders and cardiovascular disorders.

The present invention relates to AD7c-neural thread protein (NTP) and related proteins and peptides (I; ADB37528-ADB37641). The sequences are useful for treating a condition in a patient requiring removal or destruction of cells. The condition can be selected from benign or malignant tumour of a tissue, hyperplasia, hypertrophy or overgrowth of a tissue, virally, bacterially or parasitically altered from benign or malformation of a tissue, where the tissue is selected from lung, breast, stomach, pancreas, prostate, bladder, bone, ovary, skin, kidney, sinus, colon, intestine, stomach, rectum, oesophagus, heart, spleen, salivary cland, blood, brain and its coverings, spinal cord and its coverings, muscle, connective tissue, adrenal, parathyroid, thyroid, uterus, testis, pituitary, reproductive organs, liver, gall bladder, eye, ear, nose, throat, consils, mouth, lymph nodes and lymphoid tissue. The condition is preferably tonsillary hypertrophy, prostatic hyperplasia, psoriasis, ceram, dermatosis, commetic modification to a tissue (skin, eye, ear, nose, throat, mouth, muscle, connective, hair or breast tissue), vascular conse, throat, mouth, muscle, connective, hair or breast tissue), varicose
                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel Related peptide or AD7c-neural thread peptide, useful for treating unwanted cellular proliferations, glandular hyperplasia, unwanted facial—hair, warts and unwanted fatty tissue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antiatherosclerotic, Antiarteriosclerotic; Vasctropic; Antiinflammatory, Immunosuppressive, Tranquillizer, Antiemetic, Virucide, AD7c-NTP, neural thread protein; neuritic sprouting.
                  arthritis and ulcerative colitis; (c) cardicvascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections

The polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying altered levels of polypeptide. The polypeptides are also useful for identifying a proteins are useful for identifying a therapeutic agent of a proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression of physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase see stem cell proliferation, to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or
hereditary/genetic disease, traumatic disease, metabolic disease, hereditary/genetic disease, traumatic disease or physical injury, nutritional deficiency disease, infectious disease, amyloid disease, fibrosis disease, storage disease, congenital malformation, enzyme deficiency disease, poisoning, intoxication, environmental disease, radiation disease, endocrine disease, degenerative disease and mechanical disease. The peptides are useful for treating unwanted callular proliferations, glandular (e.g. prostate) hyperplasia, unwanted facial hair, warts and unwanted fatty tissue, or for preparing antibodies that recognize and/or bind to Related proteins, Related peptides or NTP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy.

antiparkinsonian; and immunostimulant. The proteins and polynuclectides encoding them can be used in gene therapy, antisense therapy and vaccine production. The proteins and polynuclectides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, neumopathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, haematopoietic disorders, anaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, osteoporosis, severe combined immunodeficiency, eczema, allergic rhintis, asthma, diabetes, cancer, multiple solerosis, depression, Alzheimer's disease, Parkinson's disease, neurodegenerative and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the

```
nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoissis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AAU29510-AAU33304 represent the amino acid sequences of novel human secreted proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to prytokine, cell proliferentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy, The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hamatopoiesis regulating activity issue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.

A polynucleotide of the invention may have a use in gene therapy. The polynucleotide and polypeptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the quanosine triphosphate-binding protein coupled receptor. The protein sequences shown in ADC85549-ADC87617 represent GPCR's of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New polynucleotide, useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor.
